Core Competencies

Greenfly SAU, LLC provides devops expertise. We have helped two DARPA projects in the Information Innovation Office to automate, build, and test their software. These included a next-generation cyber operations platform (PlanX), and an experimental radio spectrum collaboration platform (SC2).

Competencies include:

- Devops technologies and methods
- Builds: Jenkins, GoCD
- Automation: Ansible, Puppet, Saltstack, Chef
- OS: Linux, Debian, Ubuntu, Red Hat, CentOS
- Clustering: Openstack, Terraform, Docker
- Monitoring: Splunk, Graphite, Nagios
- Scripting: Python, Ruby, Bash

Differentiators

- Experience over 20 years with diverse IT industry consumers, both government and private. Broad experience with toolsets and operating environments.
- Implemented devops and devsecops solutions for diverse government agencies, from planning through execution and verification.
- Extensive technical expertise allows us to adapt appropriate devops solutions based on the customer environment.
- Worked within multiple Agile methodologies and technologies as appropriate for customer needs.
- TS / cleared
- As a small business, we are nimble and adaptable

Past Performance

NSF PPO via Northeastern University. 45K, 2020, Colosseum project devops. *Updated ops and software processes to adapt for new users.*

DARPA I2O via Johns Hopkins University APL. 465K, 2018 – 2020, Spectrum Collaboration Challenge project devops. *Prepared for award competition, transitioned to NSF. See https://greenfly.io/case-study-darpa-sc2*

DARPA I2O via Aerotek, L3/Data Tactics, CACI, 26 Labs. 715K, 2016 - 2018, Plan X project deployment/devops team. *Created automated build system, identified build blockages, deployed project metrics and monitoring, transitioned to DoD/Army. See https://greenfly.io/case-study-darpa-plan-x*
